ABOUT US

World is changing and the demands are increasing rapidly.

The need for intelligent mass transit infrastructure is now in high demand with the growth of urban populations. Increased connectivity and business relations between countries grew tremendously in the last decade and with the newly added emerging regions to the world economy, the number of airline passengers increased all over the world. In the mean time, the general security requirements to protect commercial, public buildings and critical infrastructures are now a critical element to populations well being.

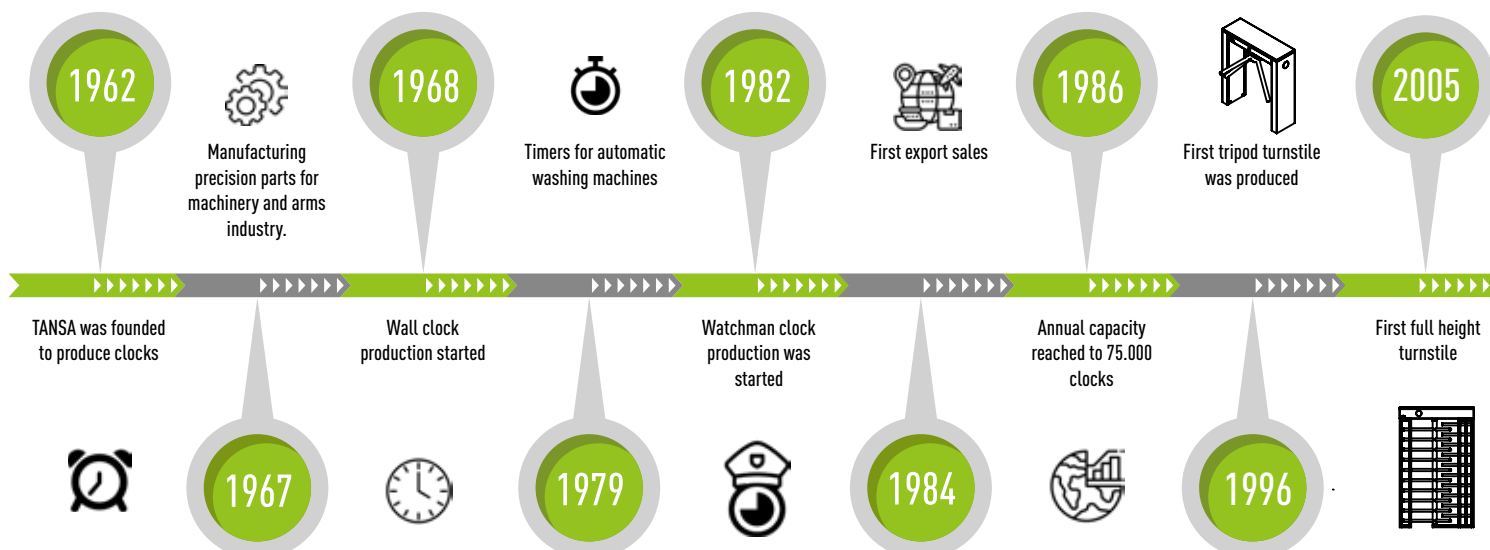

We offer entrance and flow control solutions which are ergonomically designed, effective and reliable for a higher security level and higher return on investment for the needs of:

- Commercial, public and government buildings
- Mass transit,
- Airports,
- Offices and financial institutions,
- Industrial facilities,
- Stadiums and sport facilities,
- Leisure and theme parks,
- Museums, tourist attractions and iconic facilities.

We are well aware that sustainability and protecting the environment and the climate are some of the most urgent challenges that we face collectively. We at Tansa are also tackling these challenges in our solutions; we produce more durable and more energy efficient products using recyclable materials in our environmentally friendly manufacturing facility.

As part of our sustainable business strategy, we want:

- To focus even more on the experience for the customers,
- To grow in our core business,
- To exploit the significant potential of digitization and to implement networked and IOT solutions in all product range as a priority.
- To promote new and customizable designs periodically,
- A culture of cooperation both with customers and employees that will also ensure our success in the future.

Since 1962

Our journey, which started in 1962 with the production of clocks and precision machine parts, continued with the production of turnstiles in 1996. Today TANSA is preferred for secured entrances in more than 60 countries with more than 60.000 installed units.

And now, we continue to grow by spreading our offerings through our local office and service network to be closer to our global customers for their future needs.

Museums & Iconic Facilities

Eiffel Tower - France

Gobekli Tepe - Turkey

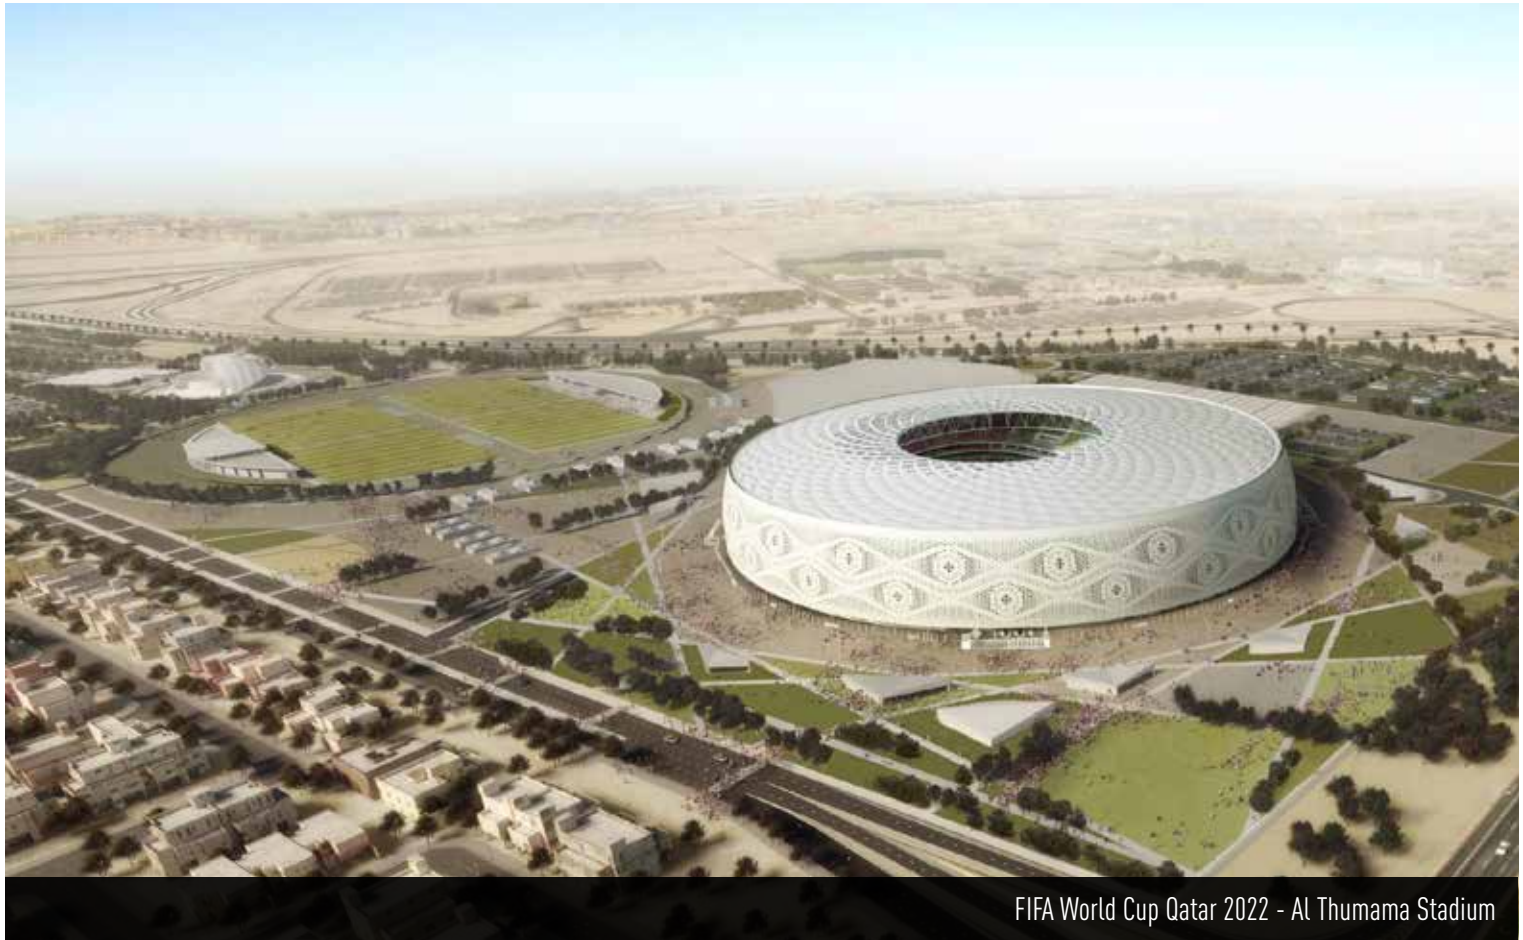

Processing long queues of visitors who are not familiar with entrance control systems is a challenge for tourist attractions facility managers. Safety and security of visitors as well as providing a smooth entrance can provide positive experiences right from the start to finish.

TANSA offers various models and customised solutions for the entrances of these facilities that needs to control and regulate crowds.

Centro de Eventos la Macarena-Colombia

Stadiums & Arenas

Sports and entertainment facilities attract large crowds that requires entry and exit in short period of peak times presents many security challenges. Majority of these facilities are used as multi-functional complexes. Easy, secure and rapid access is needed for the best guest experience.

TANSA provides full-height and waist-high turnstiles to control pedestrian traffic through specific entrances and exits of fans and spectators.

Public Transport

Connecting People in Smart Cities is a challenge. More than 50 percent of the world's population already lives in cities. Continuous growth of urban population requires for these urban areas to turn in to smart cities which requires an efficient public transport system.

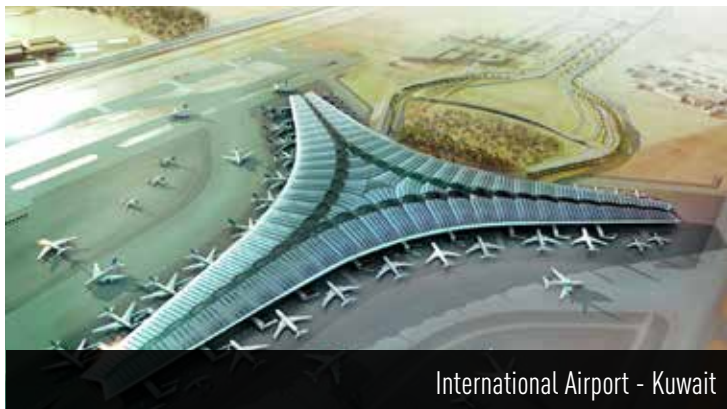

To control and regulate high flow of passengers and prevent unauthorised passage and tailgating, TANSA offers cost effective, efficient and innovative mobility solutions with minimum service needs and running costs.

Istanbul Grand Airport - Turkey

Dammam Airport - Saudi Arabia

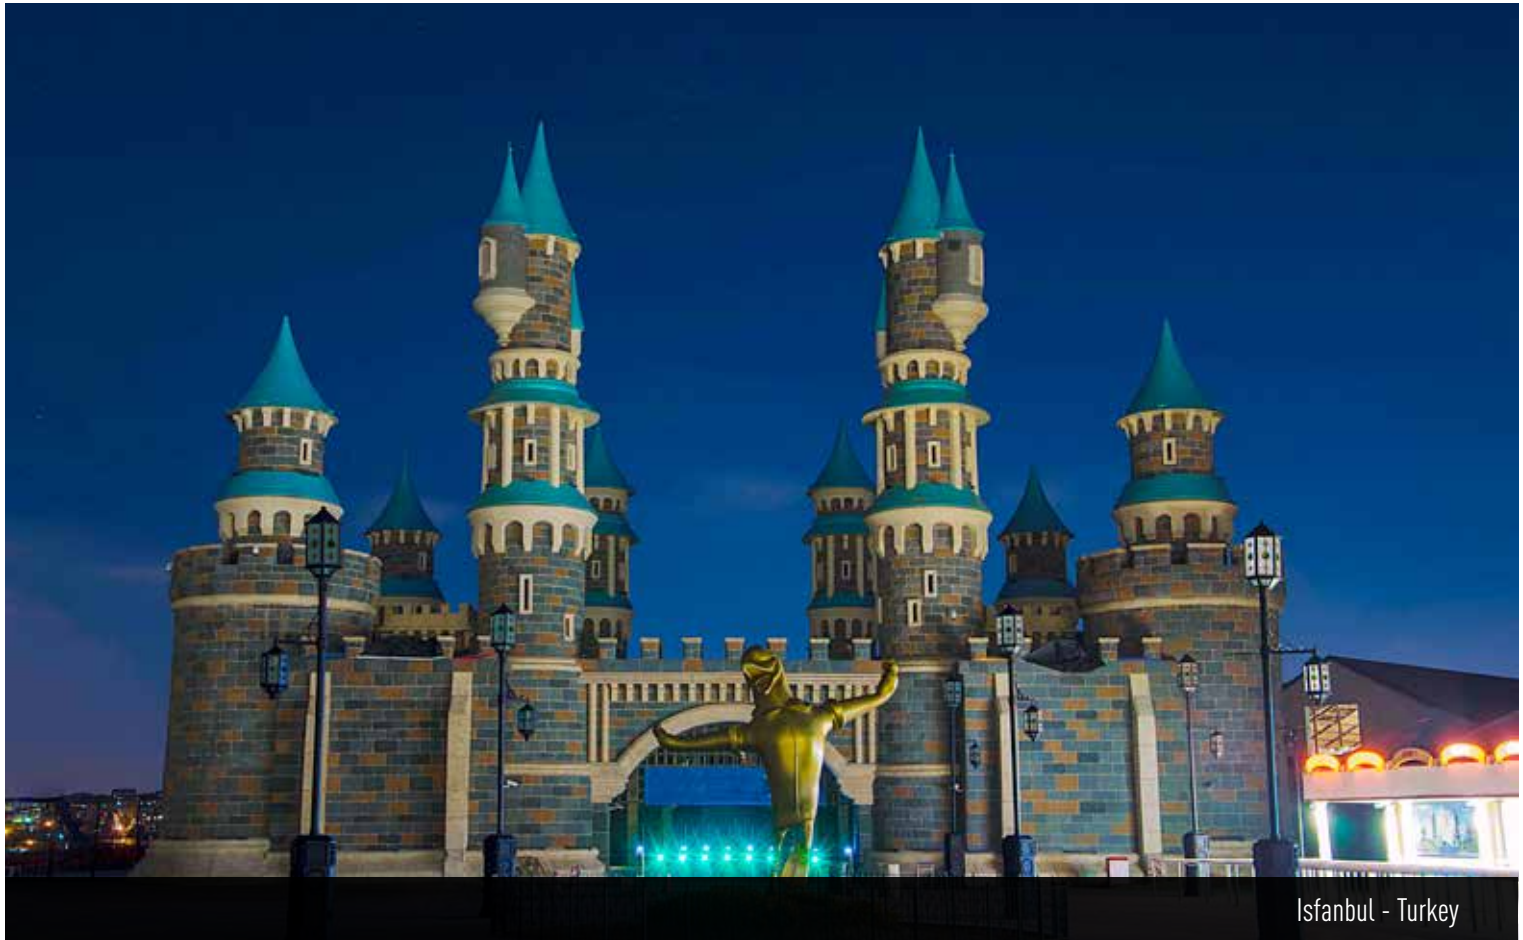

International Airport - Kuwait

The security issues facing the aviation industry are both specific and demanding. Airports are a hub for the movement of a large number of passengers and for the handling of high volumes of baggage and cargo.

As the airport industry continues to evolve with increasing national and international regulations, it faces a unique set of challenges that are set to test the ingenuity and resilience of the sector. From the tough economic climate to the increasing overheads required to meet the ever changing security standards and the pressure to significantly reduce carbon footprints, airports increasingly have to use technology to help them meet their business goals.

In today's climate of volatile threat levels it is vital to ensure that only authorized personnel have access to restricted areas. Electronic security entrance control can help achieve this. Our turnstiles have specific features designed to meet the needs of an aviation environment; at staff entrances, passenger & passport control, boarding and immigration control, private lounges, exclusive waiting areas and are flexible enough to grow and adapt as the business changes.

Leisure & Theme Park

Isfanbul - Turkey

YMCA - USA

An inviting entrance is a key for leisure facilities. Secure and user-friendly access of the paid patrons improves the guest experience while adding value and driving revenue to the facility brand.

TANSA helps leisure facilities to manage efficient entrance control while the staff's concentrating on customer service. TANSA Turnstiles & Gates can be easily integrated with any kind of access control & ticketing solutions.

Dream World Game Park - Morocco

Public & Government Buildings

SFDA - Saudi Food & Authority

Fort Bliss Replacement Hospital in Paso - Texas

Public & government buildings receive many visitors each day and this is why it is vital to ensure that only those who were given access authorisation to enter the building. These kind of buildings are high-value assets and need various type of security levels, depending on their intended use.

Our entrance solutions have proven their quality and reliability in all types government and public buildings around the World.

Istanbul Caglayan Justice Palace

Ford R&D Center - Turkey

BP Head Office - Turkey

Entrances of the office buildings are not only critical for security, these areas also give the visitors first impressions of your business. This is where security managers chose to implement reliable and elegant gates to control and regulate the entrance of the authorised persons.

Many factors are needed to be taken into consideration, from the required level of security to aesthetics to chose the perfect solution. TANSA provides entry solutions to create unique and welcoming entries to ensure the safety and security of both employees and visitors.

Novartis Building Office - USA

Industrial Facilities

International Sea Port of Tangier - Morocco

Petrojet - Egypt

The successful implementation of security entrances for industrial facilities must be executed with a layered approach. The first line of defence of these facilities typically surrounded by a security fence which is outfitted with a robust full height turnstile to provide both visual and physical deterrent against unauthorised access. Tripod turnstiles for staff entrance and speed gates for lobby entrances are generally preferred.

TANSA offers reliable and high security entrance solutions which are designed to minimise risks without impacting efficiency.

Nestle Factory - Ecuador

Banks

Central Bank - Qatar

Central Bank - Dominican Republic

Financial institutions face many challenges in today's economic climate. One very important challenge is managing restricted access.

We at Tansa understand that it is vital to ensure that only authorized personnel have access to restricted areas within financial institutions. We also understand that esthetics is a major priority in such places.

This is why we have designed products specially formulated to block any unauthorized entry while maintaining the highest level of security.
